## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-5, 7, 8, 10-15 and 17-20 are rejected under 35 U.S.C. 102(a) as being anticipated by Phadke (6,504,739).

Phadke disclose a simple control circuit for synchronous rectifier used in ZVS phase shifted full bridge converter in Figs. 3 and 6. A full bridge converter (30), input voltage source (32), primary switching circuit (34), transformer (36), rectifying circuit (38), a primary control circuit (40), a secondary control circuit (42), first switching device ( $Q_A$ ), second switching device ( $Q_B$ ), third switching device ( $Q_C$ ), fourth switching device ( $Q_D$ ), primary control circuit (40) provides zero voltage switching phase shifted control over the switching circuit (34), rectifying circuit (38) provides an output voltage ( $V_O$ ), for the converter, the rectifying circuit includes two synchronous rectifiers, first rectifying switch ( $Q_1$ ) and second rectifying switch ( $Q_2$ ). See col. 4, line 25 to col. 5, line 25.

***Allowable Subject Matter***

4. Claims 6, 9 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art of record disclose or teach a switching power supply with a delay amount control circuit to generate, based on setup information from the external terminal, a signal for controlling a delay amount in the variable delay circuit and a nullification means for nullifying delay amount control by the delay amount control circuits wherein the nullification means nullities operations of the delay amount control circuit in accordance with a state of the external terminal.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
